WISHLIST

CONCEPT

Wishlist is an app that let's you add your favorite products and then aggregates the best deal for your product from multiple online vendors.

What's more, the app can also alert you of price drops in your added products.

INSPIRATION

Online shopping is the trend nowadays and quite often, after buying your favorite product, you realize that some other online vendor was selling that same product at a lesser price and offering faster delivery. Enter Wishlist, the app that can help you in such situations by bringing up prices and delivery times of all the popular online vendors in one single view.

GOALS

To make this a full fledged interactive service which allows streamlined comparison of product prices across online and possibly offline retailers.

TECHNOLOGIES AND LIBRARIES USED

- Parse SDK for Backend Data Storage

- Various Android UI Libraries

ISSUES

- The price alert service is disabled as of now.
- Deals do not appear right away after adding an element. Restart the app to see the deal.

BEFORE YOU BEGIN

Please keep in mind that this app currently uses dummy data.
